Crease lines and wrinkles are a natural process resulting from a combination of aging, sun damage and the muscle action of facial expression. Expression lines are caused by overactive facial muscles. When Botox s injected into these muscles they relax and effectively eliminate crow’s feet, frown lines and forehead lines, leaving the overlying skin smooth and unwrinkled. Botox has also been shown to effectively reduce excessive local sweating of the palms and armpits, hence alleviating one’s misery from this debilitating and socially embarrassing condition.
